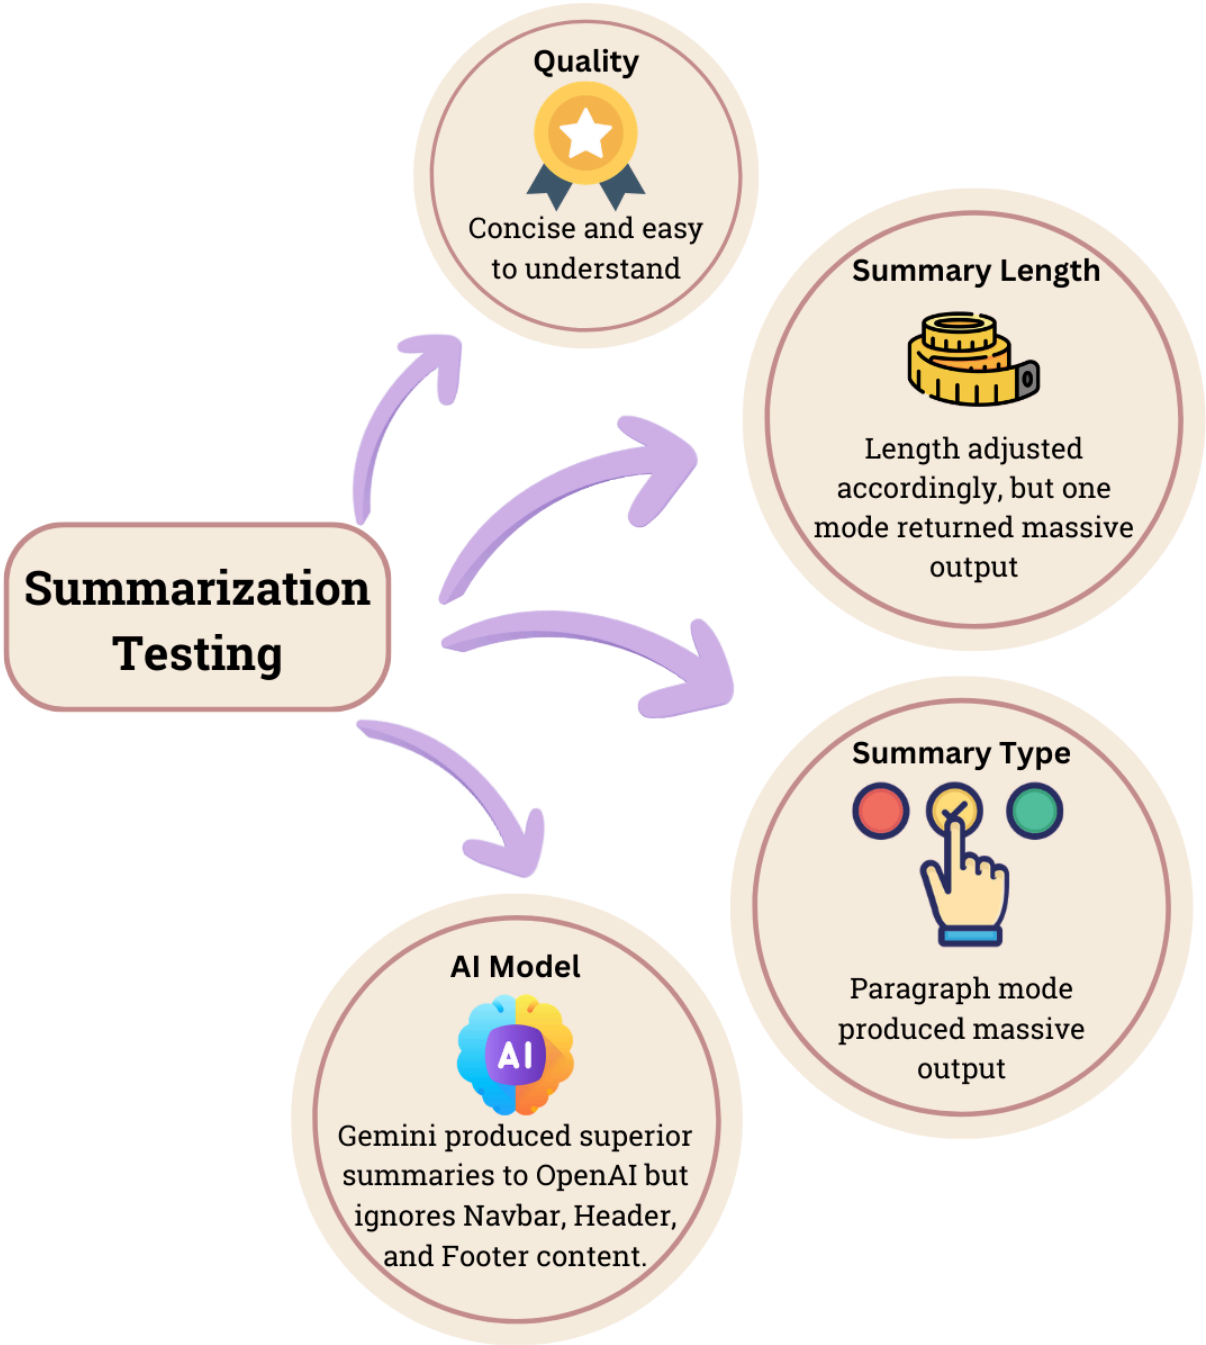
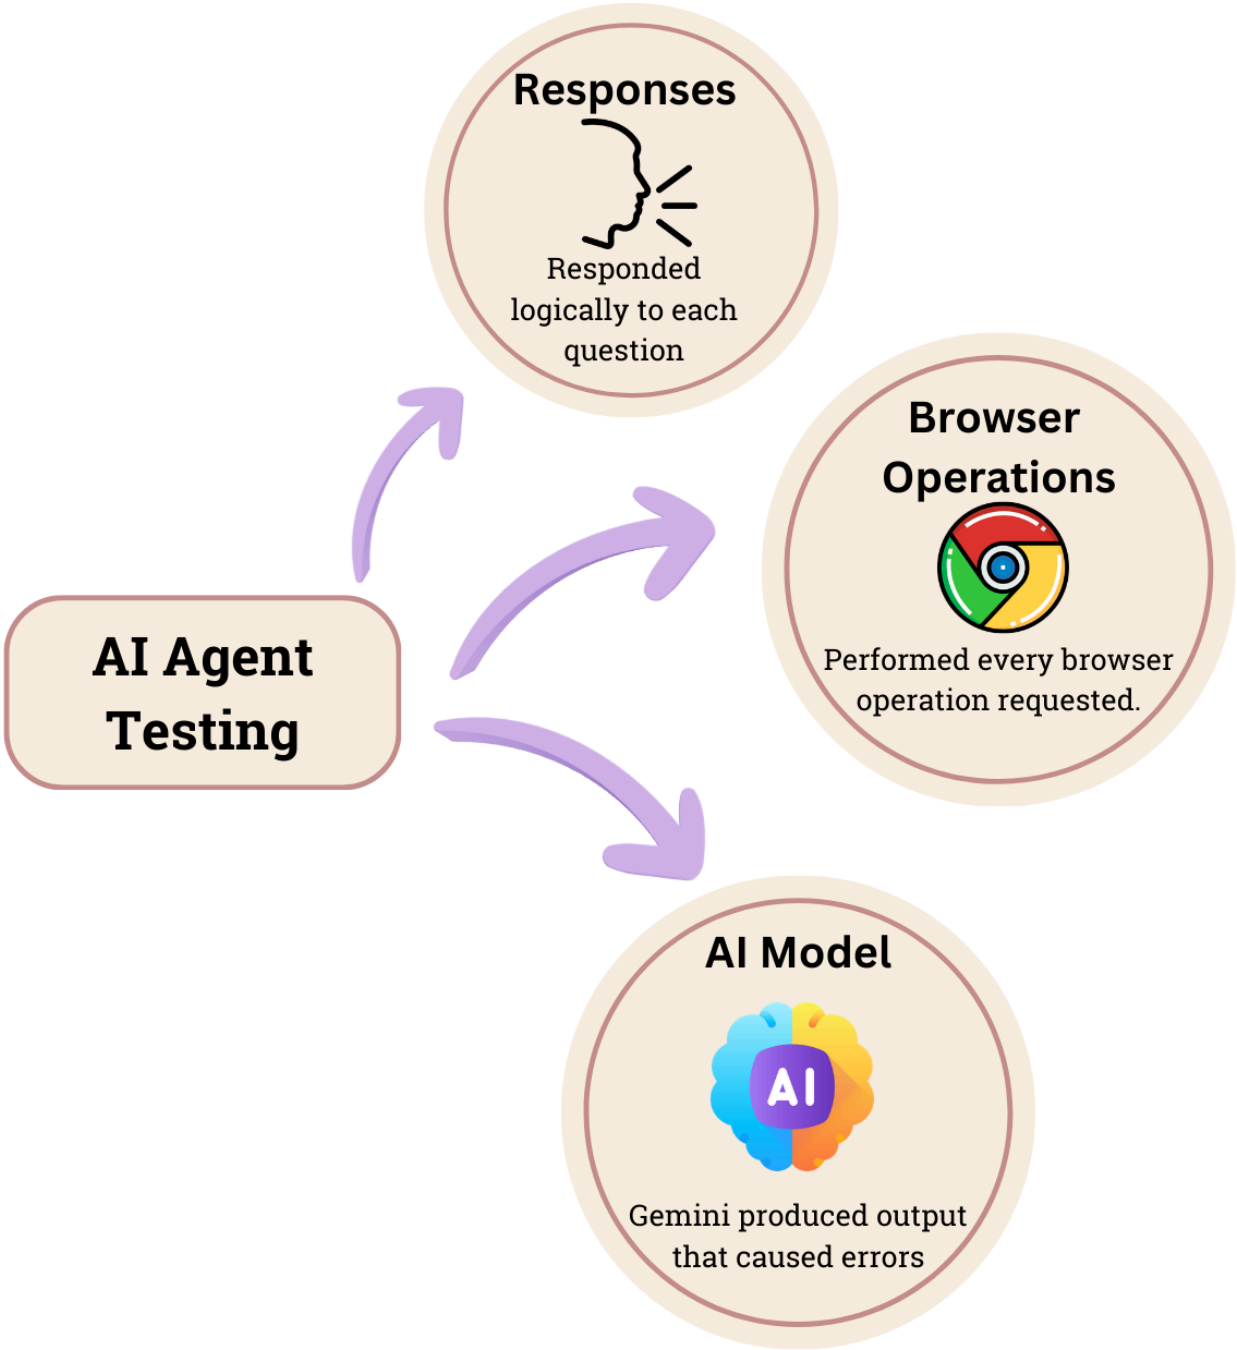
Testing Documentation

Overview:





AI Agent Testing
Responses
Responded logically to each question
Browser Operations
Performed every browser operation requested.
AI Model
AI
Gemini produced output that caused errors

Methodology of the tests

- We created a Chrome extension called Briefly that assists the visually impaired.
- We loaded Briefly into Chrome using developer mode.
- The features of Briefly can be utilized by a user through keyboard commands.
- We were able to record its output by logging and taking it from the console, while some tests relied on observation and listening.
- We then analyzed the output to create a final testing result.

Conclusion

- Our software works well as intended
- OpenAI works much better as an AI Agent compared to Gemini
- Gemini does a much better job at summarizing webpages compared to OpenAI
